Lesson guidance:

Tip: Cubes in pairs first. The 4 row is two 2 rows: every product splits into pairs.

Tip: Row OR column. Say "row or column" every time. One even number is enough.

Watch: Row only. The mistake to stop today: an even column left white.

What students need to know:

#	Skill or Concept	Atom Type	Teacher Notes
1	**Even numbers:** the count by 2s (2, 4, 6, 8 …)	Category · Pre-requisite	Prerequisite Check *a*.
2	**Facts of 2 and 4:** 4 × n is 2 × n twice	Fact · Pre-requisite	Prerequisite Check b–e.
3	**Read the chart:** row meets column	Fact · Pre-requisite	Prerequisite Check f–g.
4	**Even row:** every product is even	Comparative	Anchor chart, the even rows.
5	**Why:** 4 × n is two equal parts	Conceptual	Cubes: the 4 row is two 2 rows.
6	**One even factor is enough: row OR column**	**Category**	**Critical Atom. Routine step 2.**
7	Odd × odd is odd (contrast)	Comparative	The last Practice row only.

What students do:

Step	Task / Routine atom	Tag	Check it with

2	**Shade the even columns too.**	**New**	**Guided 2, Check Question, exit b**
3	Both odd? Leave it white.	New	Practice last row, exit c

Rows tagged New: 3 → Flow: Standard. One chunk: one even row or column number makes the product even.

How to teach:

Show, then name. Build the 2 row and the 4 row with cubes in pairs, then shade them on the window, then the even columns. Odd × odd is shown last, as a contrast, never as a second rule.

Board: Window rows 7, 8, 9 × columns 6, 7, 8, 9.

Common mistakes:

Row only	2	8, 10, 12, 14	Row OR column? Check both.	Check Question A

Tens digit decides	1	54 left white (its tens digit is odd)	Cover the tens. Read the ones.	Practice 1, *a* white box
Any odd factor is odd	2	9 × 6 left white	One even number is enough.	Exit b
Columns only	1	The 6 column shaded, the 8 row white	Rows first, then columns: finger on each header.	Exit *a*

Wrong answers to look for when marking:

Pupil wrote	Likely mistake	Next step
48, 60, 72	**Row only**	"Row OR column?" Finger on every even header.
22, 24, 36, 44, 48, 33	**Odd × odd = even**	Count the pairs: one is left over.
44 left white (11 is odd)	**Any odd factor is odd**	One even number is enough.
32 left white (its tens digit is odd)	**Tens digit decides**	Cover the tens. Read the ones.
The 4 column shaded, the 12 row white	**Columns only**	Rows first, then columns: finger on each header.
Word problem: 28, "odd"	**Any odd factor is odd**	Find one even number: 4. So 28 is even.
Word problem: 11	**Added the numbers**	4 groups of 7: draw the groups, then multiply.
